

# Supply Chain and Operations Analysis Module

**Client Value Proposition:** Enhance supply chain and operations performance across such dimensions as cost, cycle time, inventory turnover, asset utilization, quality, service level, and flexibility.

**Strategic Value:** Addresses industry challenges such as supply chain complexity, coping with rising input prices, coping with item proliferation, reducing stock-outs, and customizing assortments.

**Information and Analytical Capabilities Provided:** Delivers historical and current supply chain and operations performance metrics. This enables multi-dimensional analysis of relevant performance variables, e.g. by time period, company unit, geographic area, customer, vendor, distributor, broker, service provider, product, inventory stage, and so forth. The information and analytical capabilities enable clients to actively manage and enhance supply chain and operations performance by employing leading edge tools and proven best practices that depend on timely access to complete and consistent information.

**Bonus Opportunity:** Leveraging supply chain modeling and simulation techniques to explore alternate supply chain strategies.

**Related Modules:** Performance Scorecard, Customer Service Analysis, Inventory Management, and Supply Chain and Operations Analysis
